### 2. Citations and explanations (Rule 70.7)

Reference is made to the following documents identified in the international search report:

D1: US 4,414,866 A (HIROSHI KICHIJYO) 15 November 1983 D2: US 4,433,597 A (DAVID A. ROWLAND) 28 February 1984

The present invention relates to a push opener comprising an inner housing, an outer housing, a first advertising section, etc.

#### I. Novelty (N)

D1 and D2 are considered to represent the most relevant state of the art. These documents disclose a bottle cap opener composed of a bottom wall, a top surface, an opening and a hook member, etc., but do not disclose an inner housing, an outer housing and a filler element defined in claim 1 of the present invention.

Therefore, the subject matter of claim 1 meets the requirement of PCT Article 33(2). The subject matter of claims 2 and 3 also meet the requirement of PCT Article 33(2) because they are dependent on claim 1.

#### II. Inventive Step (IS)

The present invention according to claims 1 to 3 comprises: a transparent inner housing; a transparent outer housing; a first advertising section; an upper lid detachably assembled; a second advertising section; and a filler section placed between the inner and outer housings.

D1 discloses a cap remover comprising a hook member, a pusher, a lever, a spring, etc. D2 discloses a conventional push opener. The inner housing, outer housing, detachable upper lid, filler section and advertising section of the present invention are not disclosed in the conventional push opener and cap opener of the prior art D1 and D2 and these components cannot be easily invented by a person skilled in the art.

Therefore, the subject matter of claims 1 to 3 appears to involve an inventive step and meet the requirement of PCT Article 33(3).

#### III. Industrial Applicability (IA)

The present invention is used for a bottle opener. Therefore, the subject matter of claims 1 to 3 meet the criteria of PCT Article 33(4).
